

Mathematical Biosciences

an international journal

Volume 103 Number 1 February 1991

J. H. SWART AND H. C. MURRELL (Durban, South Africa)	
A Model of Age-Dependent Population Dynamics Providing Simple Criteria for Growth or Extinction	1
DAVID ABRAHAM KAULT AND LACHLAN MCLEOD MARSH (Townsville, Australia)	
Modeling AIDS as a Function of Other Sexually Transmitted Disease	17
RICHARD E. NEAPOLITAN (Chicago, IL)	
The Principle of Interval Constraints: A Generalization of the Symmetric Dirichlet Distribution	33
ROBERT E. ULANOWICZ (Solomons, MD) AND WILFRIED F. WOLFF (Jülich, Germany)	
Ecosystem Flow Networks: Loaded Dice?	45
JAMES A. CAVENDER (Denver, CO)	
Necessary Conditions for the Method of Inferring Phylogeny by Linear Invariants	69
LI-QUN ZHANG, JERRY C. COLLINS, AND PAUL H. KING (Nashville, TN)	
Indistinguishability and Identifiability Analysis of Linear Compartmental Models	77
CALIXTO P. CALDERÓN AND TOR A. KWEMBE (Chicago IL)	
Modeling Tumor Growth	97
L. E. HARNEVO AND Z. AGUR (Rehovot, Israel)	
The Dynamics of Gene Amplification Described as a Multitype Compartmental Model and as a Branching Process	115
CHIN LONG CHIANG (Berkeley, CA)	
A True Rate of Population Growth—Lotka's Intrinsic Rate of Natural Increase Revisited	139
BOOK REVIEW	
BARD ERMENTROUT (Pittsburgh, PA)	
<i>Mathematical Biology</i> (J. D. Murray)	153
ANNOUNCEMENTS	157
